RESTAURANT OPERATIONS MADE CLEARER

RestaurantOS Client Guide

Restaurant ke daily operations, table QR orders, team access aur subscription workflow ko simple language mein samjhein.

One workspace. Connected restaurant operations.

Menu se table tak, order se payment record tak—team ko ek connected view.

Menu → QR / Staff order → Kitchen workflow → Payment record

Operate

Branches, menu, tables aur staff organize karein.

Serve

Orders ko clear status ke saath process karein.

Grow

SaaS workspace aur subscription structure ke saath scale karein.

Version 1.0
Product overview and operating guide · 31 October 2026
Prepared for client demonstration

THE PRODUCT AT A GLANCE

RestaurantOS kya karta hai?

RestaurantOS ek web-based restaurant management platform hai. Restaurant owner apna online workspace banata hai; team usmein branches, menu, tables aur customer orders manage karti hai.

Website & account

Public website, contact form, account registration, login aur password reset ke entry points.

Restaurant workspace

Dashboard, branches, menu, tables, QR orders, Kitchen Display, waiter Service App, calendar/events, reservations, inventory, purchasing, reports aur staff.

Guest QR experience

Customer photo menu browse/search karta, cart review karta, order confirmation dekhta aur table se service request bhej sakta hai.

SaaS administration

Platform operator multiple restaurant accounts, configurable subscription plans aur billing status manage kar sakta hai.

Typical customer journey

Restaurant signup → **Workspace setup** → **Menu & tables** → **QR print** → **Guest order** → **Team processes order**

System ka purpose: restaurant operations ko ek jagah lana. Is release mein event planning, reservations, manual stock tracking, purchasing aur operational reports bhi shamil hain; yeh full accounting ya food-delivery marketplace ka claim nahi karta.

Is guide mein

- Workspace roles aur tenant data separation
- Restaurant setup: branch, menu, table, QR
- Staff orders, status flow, payment record aur settings
- Calendar/events, reservations, inventory, suppliers/purchasing aur reports
- Customer QR ordering ka end-to-end experience
- Trial, plans, limits aur Razorpay subscription billing
- Current scope, exclusions, demo checklist aur FAQs

WHO USES THE SYSTEM?

Roles aur access ka simple breakdown

Har restaurant ka account ek alag workspace hota hai. Restaurant users apne organization ke data par kaam karte hain; platform administrator SaaS-level setup karta hai.

Role	Kaun?	Typical access
Platform Admin	RestaurantOS operator	Organizations, plan configuration aur platform-level administration.
Restaurant Owner / Admin	Restaurant workspace ka owner	Apne restaurant ka dashboard, branches, menu, tables, orders, settings, staff aur billing.
Manager	Restaurant operations lead	Apne organization ke branches aur day-to-day operations; platform-wide data nahi.
Staff	Outlet team member	Assigned branch ke orders aur permitted read-only screens.
Waiter / Captain	Dining-room team	Assigned branch ka Service App: table requests acknowledge/complete karna, order serve mark karna aur payment record karna.
Chef / Kitchen Manager	Kitchen team	Assigned branch ka Kitchen Display: new tickets lena, preparation start karna aur ready mark karna.
Guest	Restaurant customer	Login ke bina table QR menu dekhe aur dine-in order submit kare.

Data separation: ek restaurant ka owner doosre restaurant ka staff, menu, orders ya branches nahi dekh sakta. Platform administrator ke cross-tenant controls alag rakhe gaye hain.

Restaurant owner account kaise banta hai?

1. ### Signup details enter karein

   Owner name, email, restaurant name, first branch name aur password.

2. ### Workspace ready hota hai

   System restaurant organization, pehli branch, default settings aur owner account create karta hai.

3. ### Trial start hota hai

   Default trial duration 30 days hai; platform configuration ke mutabik duration badal sakti hai.

Password safety: account password strong rakhein, kisi ke saath share na karein, aur har employee ko apna separate account dein. Registration aur staff account passwords kam-se-kam 12 characters hone chahiye.

FIRST-TIME WORKSPACE SETUP

Restaurant ko live use ke liye prepare karein

Demo ya production mein pehle basic business details aur menu sahi set karein. Live QR cards print karne se pehle domain, HTTPS aur table links test karein.

1. **Business details verify karein**

   Restaurant/organization profile, primary email, business status aur contact information.

2. **Branches add karein**

   Har physical outlet ka naam, unique branch code, address, contact aur active/inactive status enter karein.

3. **Categories banayein**

   Menu ko sections mein divide karein, jaise Starters, Main Course, Beverages aur Desserts.

4. **Products add karein**

   Product name, category, price, cost price, type, optional SKU, description, photo aur availability set karein.

5. **Dining tables banayein**

   Branch select karein, table number/capacity add karein aur status (available, occupied, reserved, maintenance) maintain karein.

6. **Tax, currency aur fees set karein**

   Organization Settings mein currency, tax label/rate, service charge, delivery fee aur receipt header/footer configure karein.

7. **Staff invite/create karke test karein**

   Har employee ka role aur branch assignment set karein. Waiter/captain ke liye Service App aur chef/kitchen manager ke liye Kitchen Display login test karein.

> **Live tip:** Browser se image upload karte waqt JPG, PNG ya WEBP image 2 MB se chhoti honi chahiye. Har branch par menu aur tax setup ko alag se verify karein.

MANAGE BRANCHES, MENUS & TABLES

Core restaurant modules

Branches

Restaurant ke outlets organize karein. Branch code organization ke andar unique hota hai. Owner/manager ko apni organization ka data hi dikhai deta hai.

Categories

Customer-facing menu groups set karein. Category ko deactivate karke uske products ko guest menu se hide kiya ja sakta hai.

Products & menu

Price, cost price, category, image, description aur available/unavailable status update karein. Customer order mein product ka price server se calculate hota hai.

Dining tables

Table number/capacity aur operational status dekhein. Active orders hone par system table ko available mark karne se rokta hai.

Staff management

Owner/authorized administrator team accounts create/update karein. Staff ko branch assign karein aur sirf zaroori role dein.

Search & filters

Supported lists mein name/code, branch, status, order type ya order number se records dhoondhein. Lists paginated hain.

Table QR kahan milega?

1. Dashboard se **Dining Tables** kholein.
2. Table detail page open karein.
3. Us table ka QR print ya download karein.
4. Restaurant mein sahi physical table par QR card lagayein.

QR replace karna: QR rotate karne se purana link invalid ho jata hai. Naya code print karke hi table par lagayein; stale QR se guest order nahi kar payega.

Operations workspace: Calendar mein events/maintenance schedule karein; reservations mein guest aur table time manage karein; inventory mein stock movement record karein; suppliers aur purchase orders se received quantity stock mein add karein; Reports mein date/branch ke mutabik performance dekhein.

Menu mein inactive categories/unavailable products nahi dikhte. Isse sold-out item ko customer se temporarily hide kiya ja sakta hai.

FROM ORDER TO COMPLETION

Order management workflow

Staff dashboard se order create kar sakte hain, ya customer table QR se. Har order ke saath branch, item names, quantities aur order-time price record hota hai.

Pending → Held / Resume → Preparing → Ready → Completed

Kitchen Display order ko preparing aur ready tak progress karta hai; waiter Service App se served mark karta hai. Fulfillment aur payment alag track hote hain: unpaid order serve ho sakta hai, lekin table payment settle hone tak occupied rehti hai. Completed/cancelled orders final states hain. Paid order ko status se cancel nahi kiya ja sakta; authorized staff order detail se refund ledger record kar sakte hain. Refund ko payment provider par alag se process/verify karna hoga.

Order types

Dine-in

Dining table se linked. Staff ya table QR se create ho sakta hai.

Takeaway

Restaurant staff order enter karta hai; guest QR workflow table dine-in ke liye hai.

Delivery

Staff customer name aur delivery address enter karta hai; configured delivery fee apply hoti hai.

Payment kaise record hota hai?

Payment option	System behavior
Cash	Restaurant par payment milne ke baad staff Cash method se record karta hai; open cash register ho to tender us session se link hota hai.
Card / UPI / Other	External terminal, UPI app ya anya channel par payment verify karke staff selected method se record karta hai. RestaurantOS payment provider ko charge nahi karta.
Pending	Payment baad mein lena hai to order pending rehta hai. QR dine-in order initially unpaid rehta hai.

POS billing detail: Discount, split/partial payment, invoice, refund ledger aur cash-register day close ke steps agle page par diye gaye hain.

Important distinction: Razorpay subscription checkout restaurant ke RestaurantOS plan ki payment ke liye hai. Yeh feature guest ke food order ka online payment process nahi karta.

TAKE PAYMENT WITH A CLEAR AUDIT TRAIL

POS billing controls

Admin → Orders se staff bill create, hold, resume aur process kar sakta hai. Product prices server se aate hain; customer ya browser ke bheje hue amount par bharosa nahi kiya jata.

Discount, partial & split payment

Staff fixed ya percentage discount laga sakta hai; tax aur service charge discounted amount par calculate hote hain. Order detail se partial payment ya multiple payment methods record karein. Outstanding amount se zyada payment accept nahi hoti.

Invoice & payment history

Pehli payment par invoice number banta hai. Har tender method, amount, reference aur staff member ke saath ledger mein store hota hai; receipt print ki ja sakti hai.

Refund record

Order detail se paid amount ki limit ke andar refund ledger entry banayein. Entry audit ke liye hai; actual cash/card/UPI refund ko provider par alag process aur verify karna hoga.

Cash register & day close

Cash Register se opening float enter karein. Linked cash tenders/refunds se expected cash calculate hota hai; close par counted amount, difference aur notes record karein.

Staff sequence: Order create karein → zaroorat par hold/resume ya discount lagayein → payment method(s) record karein → invoice/ledger review karein → shift ke end par cash register reconcile karein.

Limitations: Coupon redemption, split/merge bills aur food-order payment gateway checkout is release mein nahi hain.

A SMOOTH TABLE-SIDE EXPERIENCE

Customer QR se order kaise deta hai?

1

Table-specific QR scan

Guest phone camera se apne table par laga QR scan karta hai. Login ya app install ki zaroorat nahi.

2

Photo menu browse karein

Active categories, product photos aur available items dikhte hain. Search aur category filters se menu narrow kar sakte hain.

3

Cart review karein

Item add karte hi selected state, quantity controls, subtotal, configured tax/service charge aur total update hote hain; mobile par sticky order button rehta hai.

4

Order place karein aur details dekhein

Optional name/phone/notes ke saath order submit karein. Confirmation mein order number, table, timestamp, item quantities, line totals aur complete bill summary milti hai.

Kitchen Display · /kitchen-display

Standalone kitchen screen par chef ko live ticket lanes mein new, preparing, ready aur served-today orders dikhte hain. Har ticket mein table, items, quantity aur customer notes hote hain; pending tickets preparing aur phir ready mark kiye jaate hain.

Waiter Service App · /service-app

Standalone mobile-friendly app mein table cards active orders, guest requests, serving aur outstanding payment dikhate hain. Waiter request acknowledge/complete, order served mark aur Cash/Card/UPI/Other payment record kar sakta hai.

Table-side service: Guest QR page se Call waiter, Request bill ya Request water bhej sakta hai. Request branch ke Service App mein aati hai. Table payment settle hone tak occupied rehti hai, chahe order serve ho chuka ho.

Har table ka unique QR token correct table ko link karta hai. Server price aur availability dobara verify karta hai. Table reserved/maintenance ho to ordering available nahi. Internet, phone camera aur modern mobile browser chahiye; app install nahi hoti.

DAILY VISIBILITY AND PRICING SETUP

Dashboard kya dikhata hai?

Dashboard authorized user ke scope mein current database se operational snapshots dikhata hai, jaise:

Sales

Paid, non-cancelled order totals ka currency ke hisab se summary.

Orders

Order count aur status-wise breakdown.

Operations

Upcoming reservations/events aur low-stock inventory counts.

Dashboard date-filtered orders/paid sales dikhata hai. Advanced Reports mein status breakdown, top-selling quantities aur low-stock watchlist bhi hai. Yeh accounting ledger, tax filing, profit-and-loss ya inventory valuation report nahi hai.

Settings se order total kaise banta hai?

Order component	Calculation	When it applies
Subtotal	Current item price × quantity ka sum	All orders
Tax	Subtotal × configured tax rate	All orders
Service charge	Subtotal × configured service-charge rate	All orders
Delivery fee	Organization setting ka fixed fee	Delivery orders only
Discount	Discount/coupon feature is release mein nahi	Not applied

Illustrative example: ₹1,000 subtotal + 5% tax (₹50) + 2% service charge (₹20) = dine-in total ₹1,070. ₹40 configured delivery fee ke saath delivery total ₹1,110. Rates sirf example hain—apne business ke rules ke mutabik set karein.

Business responsibility: Applicable tax, tax label, customer disclosures, invoice requirements aur fee policy ko accountant/legal adviser se verify karein. Software settings tax advice nahi hain.

MULTI-RESTAURANT SUBSCRIPTION MODEL

Trial aur plans ka workflow

Platform par har customer restaurant ka separate workspace aur subscription record hota hai. Signup par default 30-day trial create hota hai. Paid plans platform administrator manage/publish karta hai.

Trial workspace → **Plan choose** → **Razorpay subscription checkout** → **Verified payment** → **Active plan**

Plan mein kya configure ho sakta hai?

- Plan name, description, monthly/yearly billing interval
- Price aur supported platform currency (current configuration)
- Razorpay recurring plan ID
- Maximum branches, staff, products aur dining tables (blank means unlimited)
- Website par dikhne wale plan features aur display order

Razorpay kis kaam ke liye hai?

Razorpay RestaurantOS subscription checkout aur recurring billing ke liye use hota hai. Checkout tabhi start hoga jab deployment credentials configured hon aur Razorpay plan ka amount, currency aur interval published plan se match kare.

Customer billing screen

Restaurant owner current trial/subscription status, available plans aur recorded payment history dekhta hai; active subscription ki renewal cancel kar sakta hai.

Cancellation

Cancellation current billing period ke end par schedule hoti hai. Access period end tak rehna chahiye; gateway webhook subscription state update karta hai.

Expiry behavior: Trial/subscription expire hone par restaurant workspace aur public table QR orders block hote hain; owner billing page tak pahunchkar plan choose kar sakta hai.

Plan feature note: Branch/staff/product/table quantity limits enforce hote hain. Plan ke feature text website par display ke liye hai; har feature ke liye alag module-level on/off control is version mein abhi nahi hai.

FOR THE RESTAURANTOS OPERATOR

Platform Admin ki responsibilities

Platform Admin ek trusted operator role hai, restaurant owner role se alag. Is role ka use sirf SaaS operations aur customer onboarding support ke liye hona chahiye.

Account operations

- Restaurant organizations dekhna/manage karna.
- Platform admin account securely create karna.
- Restaurant users ko tenant admin ke through support dena.

Plan operations

- Plan draft create/edit karna.
- Razorpay par matching recurring plan banana.
- Price/interval verify karke plan publish karna.

Billing operations

- Deployment secrets set karna; code mein nahi.
- Razorpay webhook endpoint configure karna.
- Test-mode checkout, renewal, failures aur cancellation test karna.

Customer operations

- Support contact aur escalation process dena.
- Backups/restore procedures plan karna.
- Privacy, terms, tax/refund policies business ke saath approve karna.

Business launch ke liye zaroori

✓ Domain + HTTPS, production database, production environment/debug off.

✓ Reliable outbound email for password reset aur customer support contact.

✓ Razorpay test-mode validation, published plan IDs and webhook secret.

✓ Privacy policy, terms, cancellation/refund policy aur tax disclosures reviewed.

✓ Database backup, access control, monitoring aur recovery plan.

✓ Demo records ka review; demo account/sample data ko production customers se alag rakhein.

> **Security:** Admin password, APP_KEY, database credentials aur Razorpay API secrets sirf authorized deployment operator ke paas rahen. Client-facing PDF mein kabhi credentials na likhein.

WHAT IS INCLUDED TODAY?

Current capabilities vs. not included

Client discussion mein current supported behavior aur future/custom scope ko alag rakhna important hai.

Available in current application	Not included as a working module in this release
Responsive public pages, contact enquiry, registration, login, password reset	Native iOS/Android app, offline-first operation
Restaurant/branch setup, role-based user access	Automated payroll, staff attendance/shift scheduling
Calendar/events, reservations, manual inventory/movements, supplier records, purchase orders with stock receiving, advanced operational reports	Recipe-based automatic ingredient deduction, accounting integration, tax filing, profit-and-loss or inventory valuation
Manual dine-in/takeaway/delivery order entry, held orders, status updates, discounts, partial/split tenders, invoice numbers, payment/refund ledger and cash-register reconciliation	Kitchen display/KOT printer integration, live kitchen notifications, bill split/merge and coupons
Table QR menu, cart, dine-in order submission and receipt summary	Guest food-order online payment or automatic refund processing through a payment gateway
Order totals, configured tax/service/delivery fee, date-filtered dashboard and operational reports	Advanced export/BI and formal financial statements
Razorpay-based RestaurantOS plan checkout and billing lifecycle (after gateway setup)	Delivery marketplace integrations, rider tracking, customer loyalty/CRM campaigns

> **Scope clarification:** Some marketing pages may describe broader restaurant-industry solutions. This table reflects implemented workflows verified in this application version. Any additional feature requires separate confirmation, delivery scope and acceptance testing.

Important operating assumptions

- Restaurant supplies accurate menu, product prices, branch details and tax/fee settings.
- Staff verifies actual cash/card/UPI receipt before marking an order as paid.
- Customer QR order is dine-in and pay-at-restaurant; no food checkout gateway flow.
- Plan prices, taxes and commercial terms are set by the platform operator; no defaults are promised.
- Application access requires internet and an active browser/device.

A PRACTICAL 10-MINUTE CLIENT DEMO

Suggested demonstration flow

Time	Show	Explain
1 min	Public website and signup	Restaurant gets its own workspace, first branch and trial.
1 min	Dashboard & reports	Date filters, paid sales, status breakdown, top-selling items and low-stock watchlist.
2 min	Categories/products	Menu setup, image/price/availability controls.
1 min	Tables and QR detail	Each table receives a unique QR link; old link is invalidated on rotation.
2 min	Scan QR with phone	Photo menu, search/category filters, cart totals, order confirmation and table service requests.
1 min	Customer receipt	Order number, table, item breakdown and pay-at-restaurant status.
1 min	Kitchen Display & Service App	Chef updates preparation status; waiter acknowledges a guest request, serves the order and records payment separately.
1 min	Admin orders & POS	Team holds/resumes an order, records a discount or split tender, views invoice/payment history, and reconciles the cash register.
1 min	Billing screen / plan admin	Trial/plan status, configurable limits and payment setup prerequisite.

Optional operations demo: Calendar event add karein, reservation overlap check dikhayein, stock adjustment aur purchase order receive karke updated stock history verify karein.

Before a live demo

- ✓ Use a demo restaurant, clean menu and current demo account credentials.
- ✓ Confirm APP_URL/domain and QR code point to the demo environment.
- ✓ Test a QR order and capture its order number before the client joins.
- ✓ Keep a phone connected to the same internet for QR scan demo.
- ✓ Use Razorpay test mode only; never show real API secrets.
- ✓ Explain the “not included” list before discussing custom additions.

Demo narration: “Customer apne table ka QR scan karta hai, menu se items choose karta hai aur order submit karta hai. Staff ko order dashboard mein milta hai. Restaurant payment verify karke record karta hai; subscription billing alag Razorpay workflow hai.”

COMMON CLIENT QUESTIONS · PART 1

FAQs

Q. Kya multiple restaurants is platform ko use kar sakte hain?

Haan. SaaS structure mein har restaurant ka alag organization/workspace, user scope aur subscription record hota hai.

Q. Customer QR scan karke order kare to payment kahan hoti hai?

Customer order online submit karta hai, par is workflow mein payment restaurant par hoti hai. Staff Cash, Card, UPI ya Other method se payment record karta hai; partial/split payments bhi supported hain.

Q. Razorpay order payment ke liye hai?

Nahi. Current Razorpay integration RestaurantOS software subscription billing ke liye hai; restaurant food order checkout ke liye nahi.

Q. Table QR code kahan se milega?

Admin dashboard → Dining Tables → required table detail. Wahan se print/download karein. QR rotate karne par purana code kaam nahi karega.

Q. Trial ke baad kya hoga?

Trial/active subscription access expire hone par workspace aur customer QR ordering block hote hain. Owner billing page par plan choose kar sakta hai. Live paid checkout ke liye Razorpay secrets, matching plan ID aur webhook configuration chahiye.

Q. Kya subscription price pehle se fixed hai?

Nahi. Platform Admin plan price aur limits configure karta hai. Commercial price tabhi dikhni/checkout honi chahiye jab plan publish ho aur Razorpay recurring plan matching ho.

COMMON CLIENT QUESTIONS · PART 2

More frequently asked questions

Q. Kya software stock aur inventory track karta hai?

Haan. Branch-level stock items, opening balance, manual in/out adjustments, movement history, low-stock thresholds, suppliers aur purchase orders available hain. Purchase order receive karne par entered quantity inventory mein add hoti hai. Menu recipes se automatic ingredient deduction abhi included nahi hai.

Q. Reservation overlap aur calendar kaise kaam karte hain?

Admin/manager branch ke events schedule kar sakte hain aur guest/table/time ke saath reservations bana sakte hain. Same table par overlapping confirmed/seated booking server block karta hai.

Q. Kya internet ke bina system chalega?

Nahi. Yeh web application hai; restaurant dashboard aur customer QR order ke liye active internet chahiye.

Q. Password reset email nahi aaya to?

Production email/SMTP settings check karein, spam folder dekhein aur hosting administrator se mail delivery verify karayein.

Q. Data backup aur support kaun handle karta hai?

Hosting/service provider ke saath backup frequency, retention, recovery owner aur support response times ko written agreement mein confirm karein.

A CLEAR HANDOVER FOR YOUR TEAM

Client handover checklist

- ✓ Client-approved production domain opens securely with HTTPS.
- ✓ Owner account, correct restaurant name and first branch verified.
- ✓ Staff roles and branch assignments reviewed by the owner.
- ✓ Menu, prices, unavailable items, customer-facing text and images approved.
- ✓ Reservation duration/table capacity, opening inventory quantities, reorder levels and supplier details reviewed.
- ✓ Purchase order receive workflow and stock movement audit history demonstrated.
- ✓ Tax/service/delivery settings approved by the business/accountant.
- ✓ Each physical table receives the matching printed QR code.
- ✓ QR sample order verified; staff knows order and payment recording workflow.
- ✓ Plan price, cancellation/refund terms, support contact and privacy notice approved.
- ✓ Backups, support owner and incident escalation path documented.

Glossary

Organization / Tenant	Ek restaurant business ka separate SaaS workspace.
Branch	Organization ke under ek restaurant outlet/location.
QR token	Table-specific, non-guessable link identifier; rotate karne se old link invalidate hota hai.
Plan limit	Plan ke under allowed maximum branches, staff, products ya tables.
Trial	Initial time-limited RestaurantOS subscription access.
Webhook	Razorpay ka signed server notification, jo subscription/payment lifecycle update karta hai.

Ready for your next service.

RestaurantOS keeps table orders and restaurant operations in one connected workspace.

Document note: Yeh guide 31 October 2026 ko available application behavior ke hisab se banayi gayi hai. Final pricing, commercial agreement, hosting/SLA, privacy notice, tax treatment aur legal terms ko service provider aur client alag se approve karein.
